

Lecture 3: Design process

Sruti S Ragavan

So far...

- What is HCI, and importance of context
- Human-centred design is all about usefulness and usability
 - Systematic ways to do so!
- Interdisciplinary nature of HCI
- Brief history of HCI
 - Starting with history of computers
 - Three waves – single user, groups, ethics and society.
- Today → how do build useful & usable “stuff” systematically / repeatably

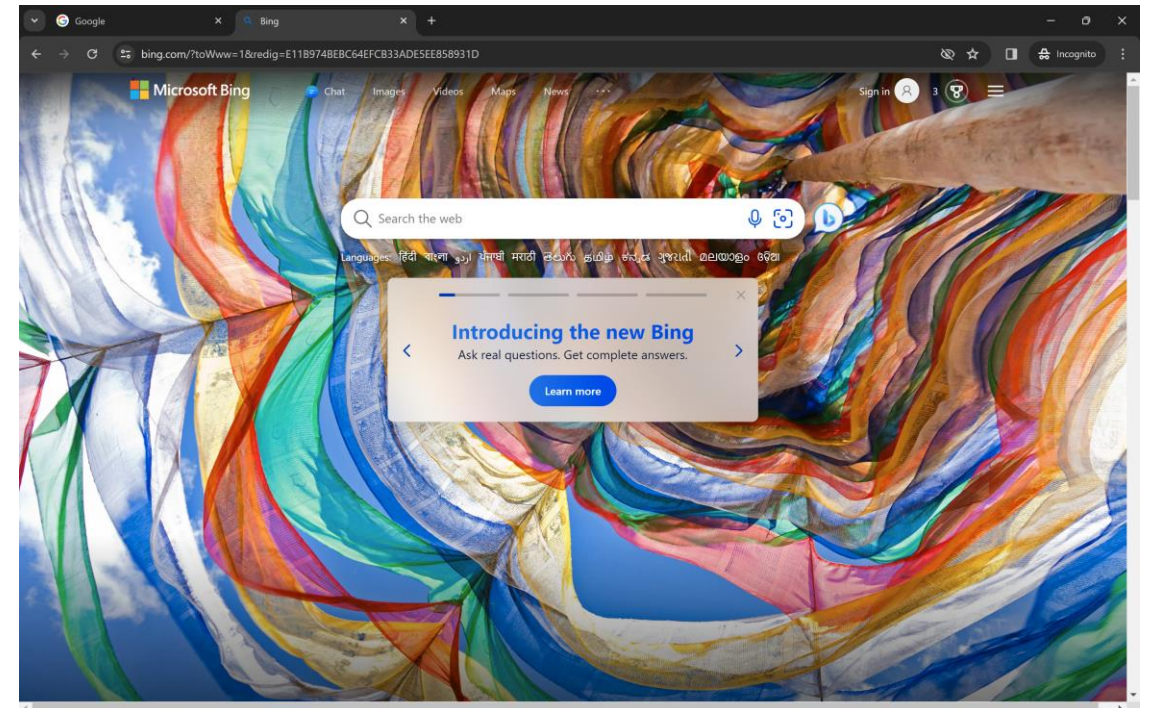

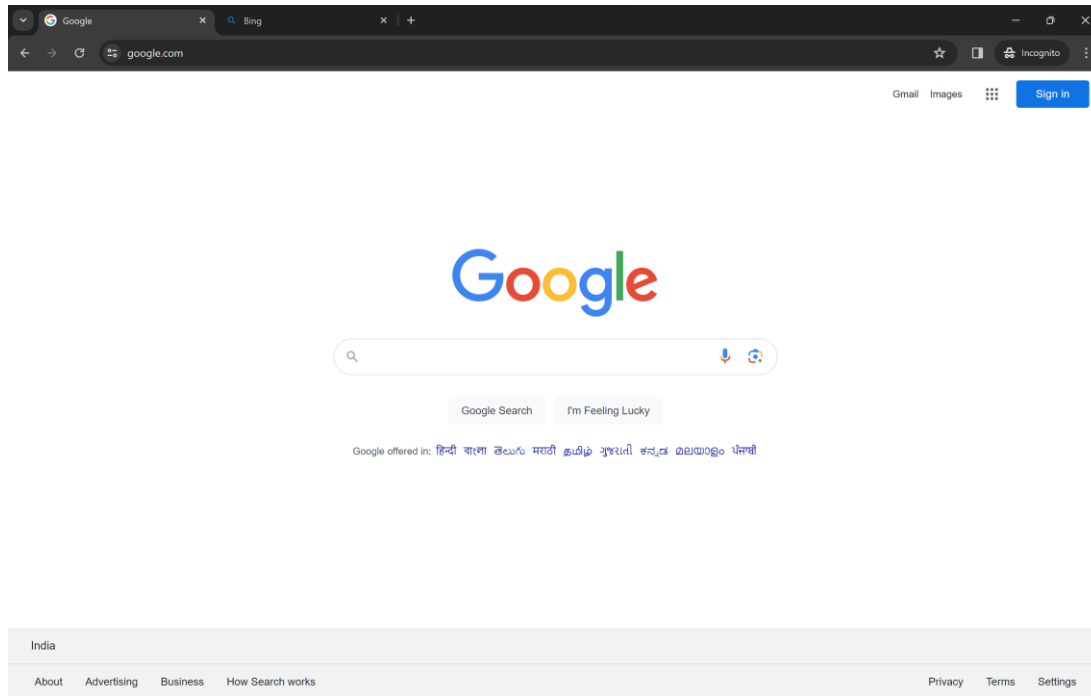

User-centred design process

- What is user-centred?
 - Start from, and focus on user needs, wants, constraints, attitudes, etc.
 - Compare to technology-centred, where you have the tech and then find use for it (have a hammer and then find a nail to hit!)
- What is design?
 - Envision, plan and create “stuff” (interface, interaction, product, homes, clothes, jewellery, machines, etc.)

Design: some basics

- What it is not
 - Not about making things pretty
 - Not about colours, fonts, layouts and appearances (alone!)
 - Not sketching and drawing
- What it is
 - Finding elegant, useful and usable solutions to problems
 - Serve the people that use the “thing”!
 - The thing’s purpose and “how to use” is obvious and not confusing
 - A mix of art, science and “creativity”
 - Like “salt in food”, good design is invisible.
 - Its absence is felt, presence goes unnoticed!

Examples of good and bad design

Customize

Designer

Design ideas

- Ask for design ideas any time by choosing Design > Design Ideas. The PowerPoint Designer toolbar button on the ribbon.
- The first time you try out PowerPoint Designer, it may ask your permission to get design ideas for you. If you want to use Designer, select Turn on.
- To learn more, see the Microsoft Privacy Statement.
- Once you've turned on "connected experiences," PowerPoint automatically shows you design ideas when you're creating your slides. Over time PowerPoint learns from your experience using design ideas and shows you design ideas at the appropriate time.

Design Ideas

Design ideas

- Ask for design ideas any time by choosing Design > Design Ideas. The PowerPoint Designer toolbar button on the ribbon.
- The first time you try out PowerPoint Designer, it may ask your permission to get design ideas for you. If you want to use Designer, select Turn on.

Other examples?

How do we design well?

Remember:
Good design aims to serve the users of the designed!

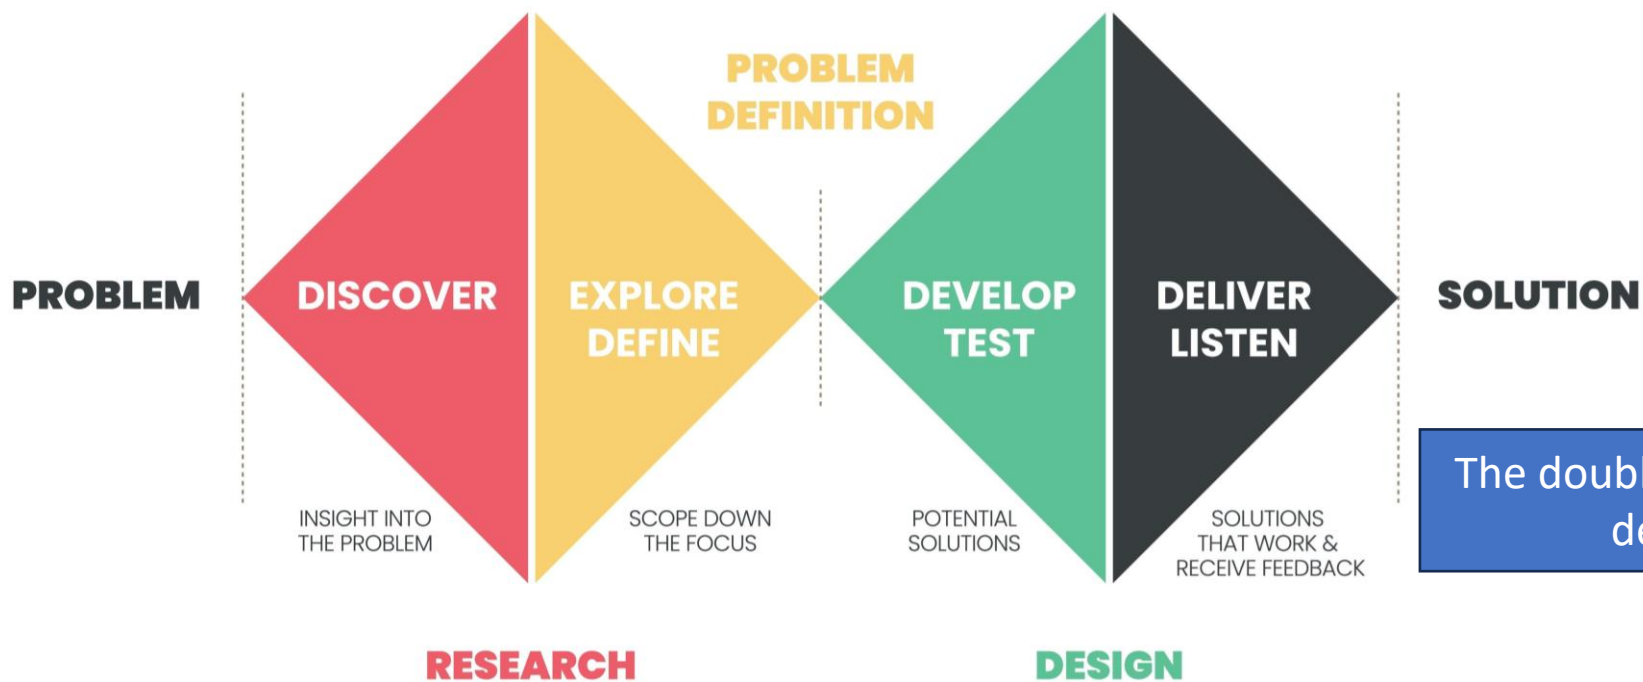

Arrows go in both directions, and between all pair of stages!

Design thinking process / framework

- Originated in Stanford, courtesy David Kelley and Tim Kelley
- Went onto build IDEO, one of the best design firms

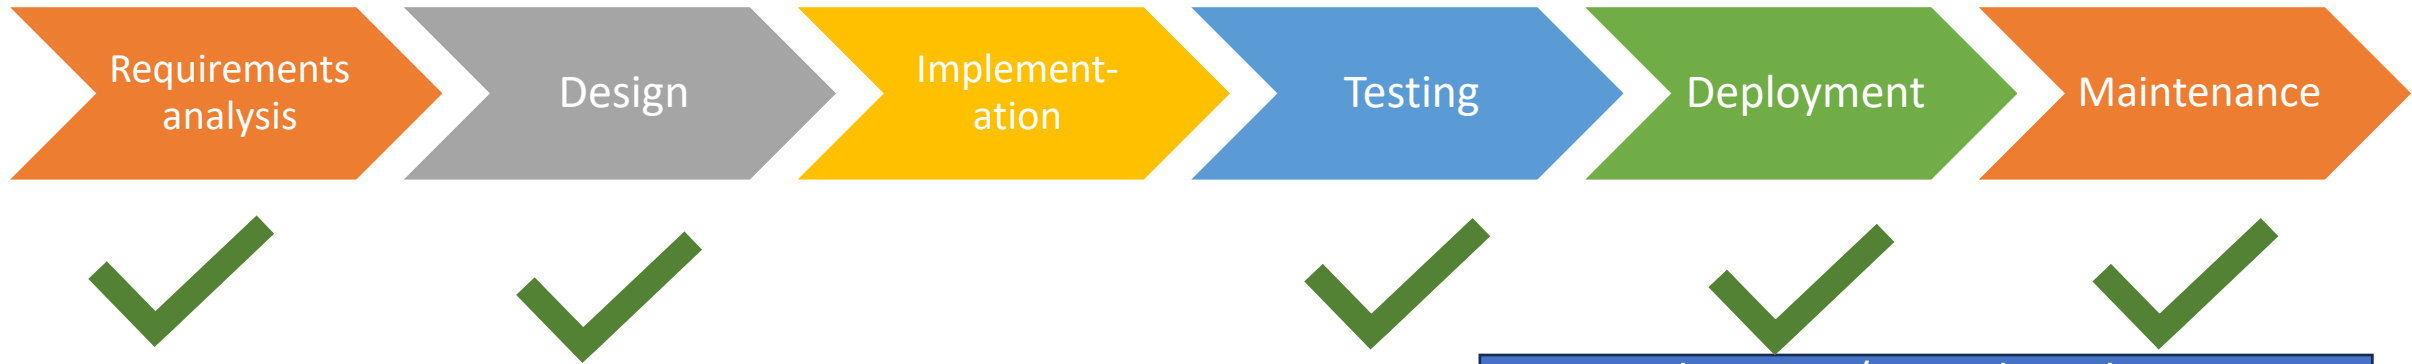

This course is about systematic ways to...

- Understand and empathize with users
- Define a problem
- Ideate solutions
- Prototype solutions
- Evaluate prototypes

Methods common broadly for all kinds of design, but
we focus on HCI problems!

Question: How does HCI fit in with SDLC?

Where do user-centred methods fit in here?

- Start doing UX / UI early in the process
- Consider the user at all stages of the SDLC process
- If you consider user needs / usability too late, it might be too late to fix issues
- The reason for most useless, unusable software!
- Most Product Management is HCI stuff!

Readings

- Preece, Chapter-1
- Dix, Chapter - 5
